

Software Requirements Specification (SRS)

Fin Tracker — Expense Tracking Web Application

1. Introduction

Purpose: The purpose of this project is to develop a web-based expense tracking application called **Fin Tracker** that helps users manage their income and expenses efficiently.

Scope: The application allows users to add, delete, and analyze transactions while storing data using LocalStorage.

Objectives:

- Simplify expense management
 - Provide spending analytics
 - Improve financial tracking
 - Create an attractive user interface
-

2. Overall Description

Product Perspective: Fin Tracker is a standalone frontend web application developed using HTML, CSS, and JavaScript.

Main Features:

- Add and delete transactions
 - Transaction history
 - Expense analytics chart
 - Dark and light mode
 - Responsive UI
 - Local storage support
-

3. Functional Requirements

Add Transaction Module: Users can enter title, amount, category, and type of transaction.

Delete Transaction Module: Users can remove transactions and update records dynamically.

Analytics Module: The system generates expense charts using Chart.js.

Theme Management: Users can switch between dark and light themes.

4. Non-Functional Requirements

- Fast response time
 - User-friendly interface
 - Secure local storage
 - Responsive design
 - Stable chart rendering
-

5. System Requirements

Hardware Requirements:

- Minimum 2GB RAM
- Desktop or mobile device

Software Requirements:

- Modern Web Browser
 - Windows/Linux/macOS
-

6. Technologies Used

Technology	Purpose
HTML	Structure
CSS	Styling
JavaScript	Functionality
Chart.js	Analytics Charts
LocalStorage	Data Storage

7. Conclusion

Conclusion:

Fin Tracker is a modern and responsive expense tracking web application designed to help users manage finances efficiently. It combines analytics, theme management, and transaction handling into a single easy-to-use platform.
