

Fin Tracker SmartExpense Tracking Web Application

Built with [HTML](#) · [CSS](#) · [JavaScript](#) · [Chart.js](#) · [LocalStorage](#) · [jsPDF](#)

B.TECH COMPUTER SCIENCE PROJECT

Problem Statement & Objectives

The Challenge

- Managing daily expenses manually is error-prone and time-consuming
- Most users lack clear financial insights into their spending habits
- Existing tools are either too complex or too limited for everyday use

Our Objectives

- Track income and expenses in real time
- Visualize spending patterns with interactive charts
- Generate downloadable PDF reports
- Improve overall financial awareness

System Overview & Technology Stack

FinTracker is a **web-based expense management application** that captures transactions, stores data locally, and renders real-time financial analytics — all without a backend server.

Frontend Layer

HTML5, CSS3 with glassmorphism effects, responsive layout

Logic Layer

Vanilla JavaScript handling transactions, validation, and UI updates

Data & Export

LocalStorage for persistence; jsPDF for report generation

System Architecture & Data Flow

FinTracker follows a clean client-side architecture. User interactions flow through the frontend interface, are processed by JavaScript logic, persisted in LocalStorage, and reflected instantly on the Analytics Dashboard.

Simplified DFD

Design Principles

- **Zero backend dependency** — fully client-side
- **Immediate feedback** — UI updates on every action
- **Data persistence** — survives browser refresh
- **Modular logic** — clean separation of concerns

Key Features

Add Transactions

Log income and expenses with category, amount, and date

Delete & History

Remove entries and browse a full chronological transaction log

Expense Analytics

Interactive Chart.js visualizations of spending by category

Dark / Light Mode

Toggle themes for a comfortable viewing experience

PDF Report Export

Generate and download professional financial reports via jsPDF

Responsive & Offline

Works seamlessly across devices; data stored locally

User Interface & Analytics

Main Dashboard

Live balance, income vs. expense summary, and category breakdown

A screenshot of the transaction history interface. It shows a scrollable log of transactions with columns for date, description, amount, and status. Each entry has a 'Delete' button next to it. The interface includes a search bar at the top and a sidebar on the left.

Transaction History

Scrollable log with delete controls and instant balance recalculation

Expense Analytics

Chart.js renders dynamic pie and bar charts from stored data

Dark Mode Interface

One-click theme switch with persistent preference via LocalStorage

Advantages & Future Enhancements

Current Advantages

Fast Performance

No server latency—
instant UI response

Visual Reports

Chart.js analytics for
clear spending insights

Responsive UI

Adapts to desktop, tablet,
and mobile

Offline Ready

LocalStorage ensures
data availability

Roadmap Ahead

Conclusion

Fin Tracker simplifies personal expense management with a clean, intuitive interface and powerful analytics — all running entirely in the browser.

It delivers **real-time financial insights**, PDF reporting, and a responsive design that works across devices.

The project demonstrates practical use of **HTML, CSS, JavaScript, Chart.js, LocalStorage, and jsPDF** in a cohesive, production-ready application.

Thank You

We appreciate your time and attention. **Questions and feedback are welcome!**
